Dear Mr. Mayhew:

Re: Harper Contracting, Inc. Expansion of Parley's Canyon Quarry

The Utah Department of Environmental Quality, Division of Air Quality (DAQ) reviewed a State Action Form for any potential impacts upon air quality for the Harper Contracting, Inc. expansion of the Parley's Canyon Quarry.

This project falls under the Utah mining activities rule found in R307-12-5 of the Utah Air Conservation Rules. This rule requires that fugitive dust emissions must be minimized as an integral part of site preparation, mining activities, and reclamation operations. Examples of fugitive dust control measures that may be used are included in the rule. Harper Contracting, Inc. should determine what types of fugitive dust controls will be used on site and formalize this information into a dust control plan. This plan is to be submitted and approved by DAQ prior to expansion activities.

The crushing/screening plant used for processing this material (i.e. screens, crushers, generators, dryers, etc.) must be evaluated by DAQ before installation, construction, or operation can occur. If the equipment being used for this processing is approved, any increase in production must be evaluated by the DAQ.

If you have any questions on this matter, please contact Carol Nielsen at (801) 536-4073.

Sincerely,

Russell A. Roberts, Executive Secretary  
Utah Air Quality Board
